## **Institute of Technology of Cambodia and EdMuse Started a Demonstration Experiment for Digital Degree Certificate ~Example of Blockchain Platform Utilization~**

Department of Information and Communication Engineering, Institute of Technology of Cambodia (Location: Phnom Penh, Kingdom of Cambodia, Dean: Heng LAY) and EdMuse Inc. (Headquarters: Shinjuku-ku, Tokyo; CEO: Keisuke Fukui) have started a demonstration experiment for the digital certificate of an individual's degree and educational background at Institute of Technology of Cambodia(ITC).

Since its establishment in 1964, ITC has enjoyed a proud record of success and achievement in serving the country through human resources development, institutional capacity building, and working intensely on the economic and infrastructure development of Cambodia. Besides, ITC has always been playing an important role in the Cambodian society and being at the cutting edge of development to improve the educational system.

The vision of ITC is "To conduct and develop human resource with a potential quality in the fields of engineer, technical, science and technology; to be an outstanding institution in training young Cambodian students with high quality and capability; to be a science and technology research center of wide recognition from national and international communities." In order to realize the vision, ITC has been actively working on DX and started the development of a digital certificate system. For ITC students, the digital degree certificate could become their own proof of education.

EdMuse Inc. carries out the mission of solving upcoming problems that happen during DX promotion with our customers.

The custom-made structure has been made possible by achieving componentization, and the figure below shows the components of the digital certificate system.

### **【About EdMuse Inc.】**
